When divorcing parents cannot agree about the custody of their children, the task of determining which prospective placement is in the child's best interests falls to the courts. Often, the legal system seeks the aid of psychologists and other mental health professionals in performing this difficult function.

*Psychology and Child Custody Determinations* reviews the scientific basis for psychologists' participation in courtroom decisions and related clinical and professional issues. It carefully describes a psychologist's navigation through the courts' adversarial system and the ethical issues involved in his or her testimony.

*A volume in our series, Children and the Law. xii, 213 pages, preface, notes, references, index.*
