Public Culture reports and reflects current research on
• the cultural transformations associated with cities, media, and consumption;
• the cultural flows that draw cities, societies, and states into larger transnational
  relationships and global political economies;
• globalization.

Public Culture seeks to
• establish an international network of scholars committed to research on
  public culture issues and debates, and on such cosmopolitan cultural forms as
  cinema, sport, television and video, restaurants, domestic tourism, advertising,
  fiction, architecture, and museums;
• explore the cultural implications of such processes as migration, the
  internationalization of fiction, and the construction of alternative modernities;
• situate these forms, flows, and processes in their historical and political
  contexts;
• encourage contributions from intellectuals both inside and outside the
  academy.
Cover:
This close-up of the rift opening across Antarctica’s Pine Island Glacier ice shelf was captured by the nadir-looking Digital Mapping System (DMS) on NASA’s DC-8, which flew over the rift on October 26, 2011. The rift measured about 820 feet across at its widest and about 100 feet at its deepest. NASA/DMS.
