RENÉ LEBON

The world we perceived would not exist without the extreme simplicity of the dualism of two entities opposed & complementsaries which can be superposed towards the infinite access of nothingness. Good and evil cannot be appreciated if they are alone. A good example is given by the fact that we can express everything with only 0 and 1.

Common Knowledge is devoted to what its editors have termed “civilian scholarship.” Its mission is to open lines of communication between the academy and the community of thoughtful people outside its walls. The journal, whose “variety of material and opinions gives it a pleasing heterogeneity” (Times Literary Supplement), challenges the ways we think about theory and its relevance to humanity.

Notre Dame Journal of Formal Logic

The Notre Dame Journal of Formal Logic publishes original work in all areas of logic and the foundations of mathematics. Leveraging a strong interdisciplinary editorial board—including esteemed scholars of philosophy, mathematics, linguistics, and computer science from around the world—the journal strikes a unique balance among historical, philosophical, and mathematical perspectives. In addition to addressing philosophical and mathematical logic at a broad level, the journal delves into disciplinary subareas such as formal semantics, modal logic, constructivist logics, recursion theory/computability theory, model theory, and proof theory and provides an outlet for work addressing computational, informatic, and linguistic concerns.
